

NEEL SOCKSTRONG HOW TO

Design Your Habitat: Make your own Puppet Astronaut!

1 GRAB A SOCK AND MAKE A PUPPET

The sock should be one that you don't mind getting glue on or cutting. Put your dominant hand in the sock [the hand you write with] and draw on the sock with a sharpie where you would like to place the eyes and mouth. With the help of an adult, then glue on some eyes and some felt for the mouth.

2 START ADDING THE SPACE SUIT

Make sure when adding any shirts, jackets, pants or any other details that you have enough space for your hand to go in and out of the puppet. Try leaving space in the back without felt, like in the picture.

3 USE CARDBOARD TO MAKE A HELMET AND BACKPACK

Cut out pieces of cardboard to make your puppet a helmet and a backpack.

4 ADDING DETAILS

Use felt and any other art supplies to create the rest of the details for your spacesuit and other parts of your puppet. Don't forget to have fun and be creative!
