

## LUNA - Our Mystic Moon

Looking from the Earth to the Moon I see you  
through the space and beyond the stars I dream of touching you  
lifeless without oxygen we cannot breathe on you  
cold without fire to burn there is no heat on you.

Up from your mountain ridges to your low valley peaks, we have much to study, learn and talk  
we have touched you and left our mark, look a footprint from our walk  
like a thief in the night, we gathered and took a souvenir, a sample of a rock  
day in and day out, you are in orbital sync with us, rotating like a great clock  
spinning throughout space, you change faces, that effects the rise of our docks.

Neither wind nor water exit on you, yet you have the power to affect the oceans flow,  
you provide the waves that a lonely surfer waits to ride the tides from high to low  
you provide the light in a dark forest for a hunter's bow.

through all this we survive living in your shadows and light from your glow.

Although, you are without water, wind, air and fire, all that we need for life and energy  
yet we must return and walk on you again and solve this ancient mystery.

LUNA you are mysterious to us all with a Dark hidden side from our Earthly gaze  
you comfort, care and provide illumination through your moon beam rays  
each night we see you for chance for us to return with a path to blaze  
you inspire our best to reach you with math computations like a puzzle in a maze  
thank to our mystic moon, we shall return soon, since you continue to amaze.
